Description

LSC was contracted by Martin/Martin to perform the traffic impact analysis for the Promontory development in Greeley, Colorado. This 670-acre mixed use development will contain about 223 acres of office park, 57 acres of business park, 400,000 square feet of commercial building space, an entertainment center, and 1,500 residential dwelling units.

LSC performed all traffic engineering for the development, including the analysis and design of six roundabouts and three traffic signals. The traffic signals were designed in conjunction with Martin/Martin to meet Colorado Department of Transportation requirements. One is located on the SH 34 bypass and the other two on the SH 34 Business Route.
